Broad reach— combining the power of two industry leaders, the new Analog.com provides an incredibly wide spectrum of information so that you can focus on the problems you need to solve and less time visiting multiple websites. Unparalleled portfolio— we like to say that with Linear and Analog, 1+1 > 2. This means that together, our product offerings unlock solutions across more industries ...

Allegro's linear position and angle Hall-effect sensor ICs are used extensively in the automotive, industrial, white goods, and consumer markets. With each of these markets they are used in a wide variety of position and angle measurement applications. In automotive electronic power steering systems for example, linear and angle position Hall-effect sensor ICs measure steering wheel angle ...

One and a half years after Kilby demonstrated his IC design, Robert Noyce of Fairchild Semiconductor Limited came up with his own integrated circuit.His model solved many practical problems which Kilby's device had. It was made up of silicon where as Kilby's was made up of germanium.

The 555 timer IC is an integrated circuit (chip) used in a variety of timer, pulse generation, and oscillator applications. The 555 can be used to provide time delays, as an oscillator, and as a flip-flop element.Derivatives provide two or four timing circuits in one package.Introduced in 1972 by Signetics, the 555 is still in widespread use due to its low price, ease of use, and stability.

The most common processing approach in the time or space domain is enhancement of the input signal through a method called filtering. Digital filtering generally consists of some linear transformation of a number of surrounding samples around the current sample of the input or output signal. There are various ways to characterize filters; for example:

At frequencies at or above 30 MHz, measurements may be performed at a distance other than what is specified in this section. Measurements are not made in the near field except where it can be shown that near field measurements are appropriate due to the characteristics of the device; and it can be demonstrated that the signal levels needed to be measured at the distance employed can be ...

Linear regulators are a cost-effective means to deliver a stable and regulated output voltage, with design simplicity and few external components. In applications where the output current is less than few amps and the output voltage is close to that of the input, low-dropout linear regulators (LDOs) provide the best cost-performance tradeoff. An LDO is a linear voltage regulator designed to ...
