

Molecular Techniques In Crop Improvement

Molecular Techniques In Crop Improvement

Pocket K No. 34: RNAi for Crop Improvement Introduction. RNA interference (RNAi) is a method of blocking gene function by inserting short sequences of ribonucleic acid (RNA) that match part of the target gene's sequence, thus no proteins are produced.

This theme focuses on the improvement of ICRISAT's mandate crops using integrated breeding approaches. It makes extensive use of the global germplasm collections available in the ICRISAT Genebank and develops diverse breeding materials, keeping in mind traits preferred by farmers, industries and consumers, and those required for the adaptation of the crop in different geographies, changing ...

Plant Mutation Breeding and Biotechnology

Marker assisted selection or marker aided selection (MAS) is an indirect selection process where a trait of interest is selected based on a marker (morphological, biochemical or DNA/RNA variation) linked to a trait of interest (e.g. productivity, disease resistance, abiotic stress tolerance, and quality), rather than on the trait itself. This process has been extensively researched and ...

Marker-assisted selection - Wikipedia

ABSTRACTWith the development of molecular marker technology in the 1980s, the fate of plant breeding has changed. Different types of molecular markers have been developed and advancement in sequencing technologies has geared crop improvement. To explore the knowledge about molecular markers, several reviews have been published in the last three decades; however, all these reviews were meant ...

DNA molecular markers in plant breeding: current status ...

Genome editing, or genome engineering, is a type of genetic engineering in which DNA is inserted, deleted, modified or replaced in the genome of a living organism. Unlike early genetic engineering techniques that randomly inserts genetic material into a host genome, genome editing targets the insertions to site specific locations.. In 2018, the common methods for such editing use engineered ...

CROP ECOLOGY, CULTIVATION AND USES OF CACTUS PEAR Published by the Food and Agriculture Organization of the United Nations and the International Center for Agricultural Research in the Dry Areas

CROP ECOLOGY, CULTIVATION AND USES OF CACTUS PEAR

Introduction. Soil salinity is a major environmental constraint to crop production, affecting an estimated 45 million hectares of irrigated land, and is expected to increase due to global climate changes and as a consequence of many irrigation practices [1, 2].The deleterious effects of salt

stress on agricultural yield are significant, mainly because crops exhibit slower growth rates, reduced ...

Salt resistant crop plants - ScienceDirect

1. Introduction. The human population is rapidly increasing and needs a substantial increase in agricultural productivity worldwide. However, various biotic and abiotic stresses are major factors limiting crop productivity .To feed the world population, productivity must be increased by 70% for an additional 2.3 billion people by 2050 .The mechanisms underlying environmental stress response ...

VCA - Vegetable Consultants Association provides advisory and development services to leading growers, produce marketing organisations and retailers on the whole range of vegetables including brassicas, cucurbits, herbs, legumes, protected crops, root and salad crops.

VCA Members - Vegetable Consultants Association-crop ...

The growing human population and a changing environment have raised significant concern for global food security, with the current improvement rate of several important crops inadequate to meet ...

Speed breeding is a powerful tool to accelerate crop ...

The methods of molecular biology includes: 1)Hemocytometer for cell count, 2)Restriction enzyme digest(a process of cutting DNA molecules into smaller pieces with special enzymes called restriction endonucleases), 3) DNA ligation (using DNA ligase enzyme that helps in joining the DNA strands together by catalysing the formation of a phosphodiester bond), 4)Transfection(a process of ...

HORIBA Medical QHSE Policy . The ISO 9001-2015 (Quality Management Standard) is the internationally recognised standard for the quality management of businesses.It applies to the processes that create and control the products and services an organisation supplies. It prescribes systematic control of activities to ensure that the needs and expectations of customers are met.
